

LMS Light Microscopy Laboratory

CONFOCAL MICROSCOPES

Leica Stellaris 5

Fully motorised upright microscope with four sensitive HyD-S detectors and conventional as well as fast resonant scanner. Additional 40x/1.25NA glycerol objective. Lightning and Navigator software.

Illumination

405nm/442nm/485-685nm White light laser

Applications

- 3D fluorescence imaging (slides & 35mm dishes)
- Lightning super-resolution imaging

Leica SP8X STED

Fully motorized inverted microscope with three PMT and two sensitive HyD detectors and conventional as well as fast resonant scanner. Hardware autofocus. Navigator software.

Illumination

405nm/442nm/Argon/470-670nm White light laser;
592nm/775nm STED depletion lasers

Applications

- 3D fluorescence imaging (multiwell plates, slides & 35mm dishes)
- Live cell imaging
- 3D gated STED super-resolution imaging

Leica SP8 DLS (Digital Light Sheet)

Fully motorised inverted microscope with three PMT detectors and one sensitive HyD detector. Hardware autofocus. Hamamatsu FLASH camera for light sheet imaging and additional camera for fast well scanning. Navigator software.

Illumination

405nm/442nm/552/638nm lasers

Applications

- 3D fluorescence imaging (multiwell plates, slides & 35mm dishes)
- Light sheet imaging of transparent aqueous samples
- Live cell imaging

Leica SP5

Fully motorized inverted microscope with three PMT and two sensitive HyD detectors and conventional as well as fast resonant scanner. LAS AF software with MatrixScreener.

Illumination

405nm/Argon/561nm/594nm/633nm lasers

Applications

- 3D fluorescence imaging (multiwell plates, slides & 35mm dishes)
- Live cell imaging

CONFOCAL MICROSCOPES

Olympus Spinning Disk

Fully motorized inverted microscope with sensitive ORCA Fusion camera. Fast Piezo focus and hardware autofocus. Yokogawa CSU-W disk. CellSense and ScanR software.

Illumination

405/488/561/640nm lasers

Spectra X light engine for widefield imaging

Applications

- 3D fluorescence imaging (multiwell plates, slides & 35mm dishes) in confocal or widefield mode
- Live cell imaging
- High content screening and analysis

LIGHT SHEET IMAGING

Phaseview Alpha3

Dual side light-sheet illumination for imaging large, optically cleared samples in aqueous or other non-toxic mounting media like ethyl-cinnamate.

Illumination

405/488/561/640/730nm lasers

Applications

- 3D multi-colour fluorescence imaging of large mm to cm sized samples
- Live cell imaging

SUPER-RESOLUTION IMAGING

Zeiss Elyra S1 SIM

Fully motorised inverted system with structured illumination super-resolution imaging capabilities, doubling the achievable resolution by a factor of 2 in XY and Z dimensions. Hardware autofocus. ZEN software

Illumination

405/488/561/640nm lasers

Applications

- 3D super-resolution imaging
- Live cell imaging

Zeiss TIRF/STORM system

Fully motorised inverted system with adjustable Cairn Opto-TIRF illumination for single molecule imaging techniques. Hardware autofocus for sample stabilisation. CSU-X1 spinning disk with single laser line for live cell imaging.

Illumination

405/462/525/638nm lasers for single molecule imaging
488nm laser for spinning disk

Applications

- 2D-3D super-resolution imaging (STORM/DNA-PAINT)
- Live cell imaging
- 3D confocal GFP live cell imaging

SLIDE SCANNING

Zeiss AxioScan Z1

Fully motorised slide scanner for imaging up to 100 slides in brightfield, polarization or multi-colour fluorescence modes. ZEN software.

Illumination

Colibri 7-colour LED light engine

Applications

- Imaging large number of histological sections

WIDEFIELD IMAGING SYSTEMS

Leica DM6000

Fully motorised upright microscope with colour camera for brightfield imaging and sensitive monochrome camera for multi-colour fluorescence imaging. Navigator software.

Illumination

Cooled light engine (DAPI/FITC/TRITC/CY5)

Applications

- Imaging large sections or whole slides in brightfield and/or fluorescence
- Scanning slides unsuitable for the slide scanner

Leica FISH

Manual upright microscope with phase contrast, DIC and 5-colour fluorescence imaging

Separate Canon DSLR camera with LED illumination panel for macro photography. Micro-Manager and EOS utility software.

Illumination

100W HBO with excitation filterwheel (DAPI/FITC/TRITC/CY5/CY7)

Applications

- Multi-colour fluorescence imaging in combination with DIC or phase contrast

Leica Microinjection

Manual inverted microscope with phase contrast, fluorescence imaging and separate colour camera. Optional Eppendorf microinjection equipment. Micro-Manager and LAS-X software.

Illumination

Cooled light engine (DAPI/GFP/RFP-mCherry)

Applications

- Imaging samples in plates and dishes (checking expression of fluorescent reporter or looking at lacZ expression)

Zeiss Upright

Manual upright microscope with phase, DIC and optional circular-polarisation contrast. Canon DSLR camera with EOS utility software.

Illumination

Brightfield only !

Applications

- DIC/phase contrast imaging of slide mounted samples
- Imaging histological samples with colour camera, also examining fibrosis with polarisation contrast

WIDEFIELD IMAGING SYSTEMS

Olympus Stereo SZX16

Manual stereo microscope with sensitive colour camera for brightfield and fluorescence imaging. ThorCam software.

Illumination

Cooled light engine (DAPI/GFP/RFP/mCherry)

Applications

- Imaging large thick samples in plates or dishes

Deltavision

Inverted Olympus IX71 microscope with motorised stage and focus. Sensitive camera and Spectra X light engine for multi-colour fluorescence imaging. SoftWorx acquisition and deconvolution software.

Illumination

7-colour SpectraX light engine
(DAPI/CFP/GFP/YFP/DsRed/mCherry/Cy5)

Applications

- 3D multi-colour fluorescence imaging of fixed samples
- Deconvolution to improve contrast of acquired image stacks

Zeiss Ultraview

Inverted Zeiss microscope with motorised stage and 300 μm piezo focus. Orca FLASH 4 camera and Spectra III light engine for five colour fluorescence imaging. Micro-Manager software.

Illumination

Spectra III light engine for imaging
(DAPI/Alexa488/Alexa555/Cy5/Alexa750)

Applications

- Fast 3D fluorescence imaging (multiwell plates, slides & 35mm dishes)
- Live cell imaging with phase contrast and fluorescence

Olympus IX70

Inverted Olympus IX70 microscope with motorised stage and 300 μm piezo focus. Orca FLASH 4 camera and Spectra X light engine for multi-colour fluorescence imaging. Live cell imaging. Micro-Manager software.

Illumination

7-colour Spectra light engine
(DAPI/CFP/GFP/YFP/DsRed/mCherry/Cy5)

Applications

- Fast 3D fluorescence imaging (multiwell plates, slides & 35mm dishes)
- Live cell imaging with phase contrast and fluorescence
- CFP/YFP FRET imaging
